No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6583275

Patent No. 6583275

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 7310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                    The present invention relates to a method for treating or prevent allergic rhinitis. The method involves employing a blood-feeding ectoparasite-derived (e.g. tick-derived) histacalin protein. The sequence is one such histacalin protein. The histacalin protein, useful for treating or preventing allergic rhinitis, both seasons perennial allergic conjunctivitis.
                                                                                                                                                      Use of histacalin proteins for treating or preventing allergic rhinitis, or for manufacturing a medicament for treating or preventing allergic rhinitis, e.g. seasonal or perennial allergic rhinitis -

                                                                                                                               This protein comprises tick Rhipicephalus appendiculatus (Ra) novel female-specific histamine binding protein 2 (FS-HBP2). Its amino acid sequence was deduced from a cDNA clone (see AAV00228) obtained from a salivary gland cDNA library. FS-HSP1 (see AAW37446) and male-specific HSP1 (see AAW37448) and a related protein, D.RET6 (see AAW37449) from Dermacenter reticularis, were also identified. These novel vasoactive amine binding proteins (VABPs) can be expressed in host cells using e.g. a baculovirus expression system. They can be used: (i) to assay histamine (or other VA such as serotonin) in be used: (i) to assay histamine (or other VA such as serotonin) in
anti-inflammatory agents, e.g scorpion bites or dermatitis,
                                                       body fluids or cell culture supernatants, e.g. to monitor the effect of allergens; (ii) for binding VA, e.g. to remove histamine from blood, food, cell cultures etc.; (iii) as an antihistamine or
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New vasoactive amine binding proteins and related nucleic acid, vectors - transformed cells and transgenic animals, used for assaying or removing histamine and as antihistamine or anti-inflammatory agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                Example

They may also be more effective and safer than conventional antihistamines
                   This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and sectonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gastric acid secretion; allergy; type I hypersensitivity reaction; asthma; urticaria; allergic rininitis; atopic dermatitis; food allergy; abnormal blood pressure; psychological disorder; vaccine respiratory disease; coronary heart disease; cellular growth regulator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-AUG-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY18079;

Histamine may also lused to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking
                                           The present invention relates to the use of a histacalin protein for treating or preventing conjunctivitis. The present sequence is the histacalin protein FS-HBPL The invention is particularly in the treatment of allergic or seasonal conjunctivitis.
                                                                                                                                                                                                                             Use of histacalin proteins for treating or preventing conjunctivitis, or for manufacturing a medicament for preventing conjunctivitis, e.g. seasonal or perennial conjunctivitis

                                                                                                                                                                                                                                         The present invention relates to a method for treating or preventing allergic rhinitis. The method involves employing a blood-feeding ectoparasite-derived (e.g. tick-derived) histacalin protein. The present sequence is one such histacalin protein. The histacalin protein, is useful for treating or preventing allergic rhinitis, both seasonal and
                                                                                                                                                                                                                                                                                                                                           Use of histacalin proteins for treating or preventing allergic rhinitis, or for manufacturing a medicament for treating or preventing allergic rhinitis, e.g. seasonal or perennial allergic rhinitis.

                                                           CC female-specific histamine binding protein (FS-HBP1). Its amino CC female-specific histamine binding protein (FS-HBP1). Its amino CC acid sequence was deduced from a cDNA clone (see AAV00227) obtained CC from a salivary gland cDNA library. FS-HSP2 and male-specific CC HSP1 (see AAW37447-48) and a related protein, D.RET6 (see AAW37449) CC from Dermacenter reticularis, were also identified. These novel CC management of the second of the second in D.RET6 (see AAW37449) CC from Dermacenter reticularis, were also identified. These novel CC constitute amine binding proteins (VABPS) can be expressed in CC be used: (i) to assay histamine (or other VA such as serotonin) in CC body fluids or cell culture supernatants, e.g. to monitor the CC from blood, food, cell culture supernatants, e.g. to monitor the CC from blood, food, cell cultures etc.; (iii) as an antihistamine or CC corpion bites or dermatitis, or as a carrier for slow release of instamine-related compounds; (iv) in vaccines to protect against CC metazoan parasites, esgencially in animals; (v) as reagents for CC immune response etc. VABPs provide a more sensitive assay for histamine than low-affinity antibodies currently used. They may called the process of the stamine of the content of the con
Sequence

                                                                                                                                                                                                                                                                                    This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease), Histamine may also be used as components of vaccines directed against blood-sucking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rhipicephalus

                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for treating or preventing allergic rhinitis. The method involves employing a blood-feeding ectoparasite-derived (e.g. tick-derived) histacalin protein. The presensequence is one such histacalin protein. The histacalin protein, is useful for treating or preventing allergic rhinitis, both seasonal and perennial allergic conjunctivitis.

                                                                                                                                                                                                                                          밁
                                                                                                                                                 Š
                                                                                                                                                                                                                                                                               from a salivary gland cDNA library. Female-Specific HSP1 and
HSP2 (see AAW37446-47) and a related protein, D.RET6 (see AAW37449)
from Dermacenter reticularis, were also identified. These novel
vasoactive amine binding proteins (VABPs) can be expressed in
be used: (i) to assay histamine (or other VA such as serotonin) in
body fluids or cell culture supernatants, e.g. to monitor the
from blood, food, cell cultures etc.; (iii) as an antihistamine or
anti-inflammatory agents, e.g. for treating insect, snake or
scorpion bites or dermatitis, or as a carrier for slow release of
histamine-related compounds; (iv) in vaccines to protect against
metazoan parasites, especially in animals; (v) as reagents for
studying inflammation, involvement of VA in ulcer formation or the
immune response etc. VABPs provide a more sensitive assay for
histamine than low-affinity antibodies currently used. They may
                                                                                                                                                                                Matches
                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This protein comprises tick Rhipicephalus appendiculatus (Ra) numale-specific histamine binding protein 1 (MS-HBP1). Its amino acid sequence was deduced from a cDNA clone (see AAV00227) obta

The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gabtric acid secretion; allergy; type I hypersensitivity reaction; asthma; urticaria; allergic rhinitis; atopic dermititis; food allergy; drug allergy; abnormal blood pressure; psychological disorder; vaccine; respiratory disease; coronary heart disease; cellular growth regulator; tissue repair; blood-sucking ectoparasite; therapy.

                                                                                                                                                                                                                 This sequence is an example of a histamine or serotonin binding compound (A), of the invention. cDNA encoding this sequence was isolated from a mixed Boophilus microplus/Ixodes hexagonus cDNA expression library. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rininitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking ectoparasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gastric acid secretion; allergy; type I hypersensitivity reaction; asthma; urticaria; allergic rhinitis; atopic dermatitis; food allergy; drug allergy; abnormal blood pressure; psychological disorder; vaccine; respiratory disease; coronary heart disease; cellular growth regulator;

                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         from a mixed Boophilus microplus/Ixodes hexagonus CDNA expression library. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking ectoparasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Histamine and serotonin binding compounds useful for the treatment of allergies

                                                                                                                                                                                                                                                                                                                                                                                                                         This protein comprises tick Dermacenter reticularis (Dr) novel vasoactive amine binding protein (VABP) D.RET6. Its amino acid sequence was deduced from a cDnA clone (see AAV00230) obtained from a Dr salivary gland cDNA library. 3 Novel VASPs, designated FS-HBP1, FS-HBP2 and MS-HBP1 (see AAW37446-48), of the tick Rhipicephalus appendiculatus have also been identified. The
